

# Why is Air travel the safest compared to Bus and Railroad?

Is flying that safe? Yes, it most certainly is. And here's why. when the crashes data was compared from years 1990 to 2015, Air travel had the lowest crashes compared to Buses and Railroad.

Airline fatalities, when compared to Vehicle fatalities, started decreasing drastically since 1970 due to safety measures, and were way less than Vehicle fatalities over the years

Air Travel is the safest way to travel! Though flight fear still exists, it is almost completely unfounded. Accidents tend to be highlighted by the media, blowing them out of proportion.
